## » APPLICATION

Differential pressure and volume flow transducer for monitoring differential pressure and volume flow of air and other non-flammable and non-aggressive gases. Three types with eight different measuring ranges are available for different applications. In addition to differential pressure all variants provide the calculated volume flow as second analog output signal. LCD models with RGB background light have a transparent cover. Display configuration, k-values for flow calculation (default 1500) and threshold values for color changes can be parameterized via Thermokon USEapp. With the relay option board, 2-point controllers or with both relays 2 cascaded 2-point controllers for differential pressure or volume flow can be implemented. The mounting base (included in delivery) allows mounting on a level surface or mounting on DIN rail TS35 (35x7,5 mm) according to EN 60715.

» **MOUNTING ADVICES**

Before installing the device, please check the leak tightness of the pressure lines. A prerequisite for the operation is a proper installation of all electrical supply, control and sensing leads as well as the pressurized connection line.

- In order to connect the device, the process lines must be unpressurized
- Consider the suitability of the device for the medium to be measured
- Consider maximum pressures

**1.** Mount the DPA+ mounting base in a suitable location and attach the DPA+. **Note alignment!**

**2.** Prepare the duct for mounting and mount the duct connection piece. **Attention! Observe dimensions!**

**3.** Connect pressure tubes to the device. **Attention! Observe labeling!**

**4.** Connect pressure tubes to the duct connection pieces

Further calculation formulas, fan manufacturers and k-values can be selected via the USEapp.

» **AUTOMATIC ZERO-POINT ADJUSTMENT - (OPTIONAL)**

**Transmitters equipped with the auto-zero adjustment are maintenance free.**

The auto-zero adjustment electronically adjusts the transmitter to zero every 10 minutes. The function eliminates all output signal drift due to thermal, electronic or mechanical effects. The auto-zero adjustment takes approx. 4 seconds after which the device returns to its normal measuring mode. During the 4 second correction period, the output and display values will freeze to the latest measured value.

» **MANUAL ZERO-POINT ADJUSTMENT (FOR DEVICES WITHOUT AUTO-ZERO FUNCTION)**

In normal operation zero point adjustment should be executed depending on the device and the measuring range.

**Attention! For executing zero point adjustment the power supply must be connected one hour before.**

- Release both connection tubes from the pressure terminals + and -
- Press the button until the LED lights permanently
- Wait until the LED flashes again and reinstall the connection tubes to the pressure ports (note + and -)
