» APPLICATION NOTICE FOR HUMIDITY SENSORS

At regular environmental condition, it is recommended to calibrate the sensor annually to check the compliance with the accuracy required in the application. The following conditions can damage the sensor element or lead in long term to loss of the specified accuracy:

- Mechanical stress
- Contamination (e.g. dust / fingerprints)
- Aggressive chemicals
- Ambient conditions (e.g. condensation on measuring element)

Do not touch the sensor elements!

Re-calibration or exchange of the sensor element are not subject of the general warranty.

» **MOUNTING ADVICE**

The sensor can be mounted on the ventilation duct by means of the mounting flange MF20 TPO (optional with mounting base). **Align the openings on the sensor tube according to the flow direction.** To prevent condensate permeation the pipe must be installed in an orientation that occurring condensate can run off.

Remove the lower section of the sensor carefully and pulling straight out.

Don't tilt the sensor during mounting / dismounting!

Mount the holes in flow direction

» **BATTERY INSTALLATION**

The FTK+ BAT LRW is powered by 1 or 2 inserted AA batteries. Using 2 batteries will increase the battery life.

Insert the batteries into the battery compartment as shown. (included in the scope of delivery)

When using a single battery, please use the battery compartment 1.

» **ADVICE FOR COMMISSIONING:**

The LoRaWAN credentials required for commissioning can be read out via the uConfig software or the LRWapp. On request, the LoRaWAN credentials can also be provided in digital form. For this purpose, please contact your respective contact person.

» **INFORMATION ABOUT LORAWAN SPECIFICATION**

The Thermokon LoRaWAN specification can be downloaded from our website.
