

Room Planning with EasySens®

ATTER

The wireless EnOcean based system **EasySens**® enables a networked building automation - self-powered, intelligent and maintenance-free. Thus, **EasySens**® offers best possible flexibility for realizing individual requirements in new buildings and refurbishments.

EasySens[®] – how it works:

Compatible with:

LON **BACnet** lodbus κ́NX

- » Easy configuration via RF
- » Setting of configuration properties e.g. waking-up cycles, measuring values or functions of input/outputs – configuration parameters are taken over into the device setting instantly
- » Saving of configuration properties
- » Clear and centralized availability of system information
- » Easy maintenance and support

airConfig and airScan - how it works (videos)

NOW AVAILABLE: RADIO FANCOIL/ROOM CONTROLLER - JOY SR

- » integration into existing EasySens® applications
- » controlling valve actuators and 0..10 V EC motors
- » learn-in of EasySens® transmitters
- (e.g. temperature sensors / motion detectors / door and window contacts)

- ADVANTAGES.
- » Cost effective with comfort by Energy Harvesting (energy production from the sensor environment)

G

- » High flexibility with sensor location, fast and easy installation
- » Reduction of fire load no need for wires
- » Easy integration into existing buildings without the need for wires
- » Direct mounting at representative measuring points
- » Compatibility to other manufacturers by using the international standard (IEC 14543-3-10)

MEASURING AND MONITORING

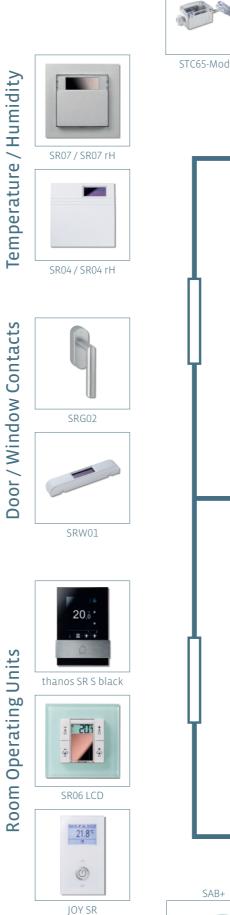

- » Transmitting range planning and determination of optimal device location
- » Monitoring function for easy evaluation of RF telegrams
- » Logging, repeater function and possibility of remote maintenance
- » Status detection of product ID, field strength and manufacturers of integrated products
- » Data export for further process/analysis in CSV-, XML- or XLS-File

Air Quality

For more than 30 years Thermokon has been standing for improvements of intelligent buildings with engineering, innovation and quality "Made in Germany". Thanks to the development and production of advanced sensors and sensor systems we are creating a benefit to our customers worldwide. Efficiency, sustainability and openness to new ideas are also in the focus of our attention as well as a close cooperation and continuous dialogue with our clients.
